

# Energy Management Power Analyzer Type WM14 96 "Advanced version"

CARLO GAVAZZI

- Protection degree (front): IP65
- 2 digital outputs
- 16 freely configurable alarms with OR/AND logic linkable with up to 2 digital outputs
- RS422/485 serial output (MODBUS-RTU), iFIX SCADA compatibility

- Class 1 (kWh), Class 2 (kvarh)
- Accuracy  $\pm 0.5$  F.S. (current/voltage)
- Power Analyzer
- Instantaneous variables read-out: 3 DGT
- Energies readout: 8+1 DGT
- System variables:  $V_{LL}$ ,  $V_{LN}$ ,  $A_n$ ,  $A_{dmd\ max}$ ,  $VA$ ,  $VA_{dmd}$ ,  $VA_{dmd\ max}$ ,  $W$ ,  $W_{dmd}$ ,  $W_{dmd\ max}$ ,  $var$ ,  $PF$ ,  $Hz$ ,  $ASY$
- Single phase variables:  $V_{LL}$ ,  $V_{LN}$ ,  $V_{LN\ min}$ ,  $V_{LN\ max}$ ,  $A$ ,  $A_{min}$ ,  $A_{max}$ ,  $A_{dmd}$ ,  $VA$ ,  $W$ ,  $W_{dmd}$ ,  $W_{max}$ ,  $var$ ,  $PF$ ,  $PF_{min}$
- Harmonic analysis (FFT) up to the 15<sup>th</sup> harmonic (current and voltage)
- Four quadrant power measurement
- Energy measurements: total and partial kWh and kvarh
- Hour counter (5+2 DGT)
- TRMS meas. of distorted sine waves (voltages/currents)
- Universal power supply: 90 to 260 VAC/DC, 18 to 60 VAC/DC
- Front dimensions: 96x96mm
- Voltage asymmetry, phase sequence, phase loss control

## Product Description

3-phase advanced power analyzer with integrated programming key-pad. Particularly recommended for the measurement of the main electrical variables.

Housing for panel mounting, with RS485 communication port or pulse and/or alarm outputs.

## How to order WM14-96 AV5 3 HR2 S1 AX

## Output Specifications

|                        |   |                              |   |
|------------------------|---|------------------------------|---|
| <b>Digital outputs</b> |   | <b>Insulation</b>            | V <sub>OFF</sub> 30 VDC max.<br>By means of optocouplers, 4000 V <sub>RMS</sub> output to measuring inputs, 4000 V <sub>RMS</sub> output to power supply input. |
| Pulse type             |   | <b>Relay outputs</b>         |   |
| Number of outputs      | Up to 2   | Purpose                      | For alarm outputs or for pulse outputs  |
| Type                   | Programmable from 0.01 to 500 pulses per kWh/kvarh<br>Pulse duration<br>≥ 100ms < 120msec (ON),<br>≥ 100ms (OFF)<br>according to EN62053-31   | Type                         | Relay, SPST type<br>AC 1-5A @ 250VAC<br>DC 12-5A @ 24VDC<br>AC 15-1.5A @ 250VAC<br>DC 13-1.5A @ 24VDC   |
| Alarm type             |   | Mechanical life              | ≥30x10 <sup>6</sup> operations  |
| Number of outputs      | Up to 2, independent  | Electrical life              | ≥10 <sup>5</sup> operations<br>(@ 5A, 250V, PF1)  |
| Alarm modes            | Up alarm, down alarm, in window alarm, out window alarm. Start-up deactivation function available for all kinds of alarm. All of them connectable on all variables (see the table "List of the variables that can be connected to") | Insulation                   | 4000 V <sub>RMS</sub> output to measuring input, 4000 V <sub>RMS</sub> output to supply input.  |
| Set-point adjustment   | From 0 to 100% of the display scale   | <b>RS422/RS485</b>           | (on request)<br>Multidrop<br>bidirectional (static and dynamic variables)   |
| Hysteresis             | From 0 to full scale  | Connections                  | 2 or 4 wires, max. distance 1000m, termination directly on the instrument   |
| On-time delay          | 0 to 255s   | Addresses                    | From 1 to 255, selectable   |
| Output status          | Selectable; normally de-energized and normally energized  | Protocol                     | MODBUS/JBUS (RTU)   |
| Min. response time     | ≤400ms, filters excluded, With FFT off; ≤1s, with FFT on. (With Set-point on-time delay: "0 s")   | Data (bidirectional)         |   |
| Remote control         | The digital outputs status can be managed by means of serial communication RS485 if programmed as "rEm"   | Dynamic (reading only)       | System and phase variables: see table "List of variables..."  |
| <b>Note</b>            | The 2 digital outputs can also work as pulse output and alarm output.   | Static (reading and writing) | All the configuration parameters.   |
| <b>Static outputs</b>  |   | Data format                  | 1 start bit, 8 data bit, no parity, 1 stop bit  |
| Purpose                | For pulse outputs or for alarm outputs  | Baud-rate                    | 4800, 9600, 19200, 38400bits/s  |
| Signal                 | V <sub>ON</sub> 1.2 VDC/ max. 100 mA  | Insulation                   | By means of optocouplers, 2.5 K V <sub>RMS</sub> output to measuring input<br>2.5 K V <sub>RMS</sub> output to supply input                                     |

## Software functions

(x) = available (o) = not available

◆ These variables are available also as MAX detection and data storage (on EEPROM at power down).

H These variables are available also as MIN detection and data storage (on EEPROM at power down).

□ Highest value among the 3-phase.

○ Alarm available only on the consumed power (+).

# These variables are available also for the MAX values, which have not been stored in the EEPROM at power down.

Δ These variables are available also for the MIN values, which have not been stored in the EEPROM at power down.

## Alarm parameters and logic

- Block enable.
- Controlled variable (VLN, ...).
- Alarm type (up, down, in window, out window).
- Activation function.
- ON set-point.
- OFF set-point.
- ON delay.
- Logical function (AND, OR).
- Digital output (1, 2).

} **A, B, C... up to 16**  
parameter control blocks.

**Note:** any alarm working mode can be linked to the "Start-up deactivation" function which disables only the first alarm after power on of the instrument.

## AND/OR logical alarm examples:

## Display pages

### Display variables in 3-phase systems (in a 3-phase system with neutral)

| No | 1 <sup>st</sup> variable | 2 <sup>nd</sup> variable | 3 <sup>rd</sup> variable | Note  |

MSD: most significant digit  
LSD: least significant digit

#### 1) Example of kWh visualization:

This example is showing 15 933 453.7 kWh

#### 2) Example of kvarh visualization:

This example is showing 3 553 944.9 kvarh

## Waveform of the signals that can be measured

**Figure A**  
**Sine wave, undistorted**

Fundamental content            100%  
Harmonic content                0%  
 $A_{rms} = 1.1107 | \bar{A} |$

**Figure B**  
**Sine wave, indented**

Fundamental content            10...100%  
Harmonic content                0...90%  
Frequency spectrum: 3rd to 16th harmonic  
Additional error: <1% FS

**Figure C**  
**Sine wave, distorted**

Fundamental content            70...90%  
Harmonic content                10...30%  
Frequency spectrum: 3rd to 16th harmonic  
Additional error: <0.5% FS

## Accuracy

**Wh**, accuracy (RDG) depending on the current

**varh**, accuracy (RDG) depending on the current

## Used calculation formulas

## Phase variables

Instantaneous effective voltage

$$V_{IN} = \sqrt{\frac{1}{n} \cdot \sum_1^n (V_{INi})^2}$$

Instantaneous active power

$$W_1 = \frac{1}{n} \cdot \sum_1^n (V_{INi}) \cdot (A_1)_i$$

Instantaneous power factor

$$\cos\phi_1 = \frac{W_1}{VA_1}$$

Instantaneous effective current

$$A_1 = \sqrt{\frac{1}{n} \cdot \sum_1^n (A_1)_i^2}$$

Instantaneous apparent power

$$VA_1 = V_{IN} \cdot A_1$$

Instantaneous reactive power

$$VAR_1 = \sqrt{(VA_1)^2 - (W_1)^2}$$

## System variables

Equivalent three-phase voltage

$$V_{\Sigma} = \frac{V_{12} + V_{23} + V_{31}}{3}$$

Three-phase reactive power

$$VAR_{\Sigma} = (VAR_1 + VAR_2 + VAR_3)$$

Neutral current

$$An = \overline{A_{L1}} + \overline{A_{L2}} + \overline{A_{L3}}$$

Three-phase active power

$$W_{\Sigma} = W_1 + W_2 + W_3$$

Three-phase apparent power

$$VA_{\Sigma} = \sqrt{W_{\Sigma}^2 + VAR_{\Sigma}^2}$$

Three-phase power factor (TPF)

$$\cos\phi_{\Sigma} = \frac{W_{\Sigma}}{VA_{\Sigma}}$$

## Energy metering

$$kWh_i = \int_{t_1}^{t_2} P_i(t) dt \approx \Delta t \sum_{n_1}^{n_2} P_{i,j}$$

$$kVarh_i = \int_{t_1}^{t_2} Q_i(t) dt \approx \Delta t \sum_{n_1}^{n_2} Q_{i,j}$$

Where:

$i$ = considered phase (L1, L2 or L3)  
 $P$ = active power;  $Q$ = reactive power;  
 $t_1, t_2$ = starting and ending time points of consumption recording;  $n$ = time unit;  $\Delta t$ = time interval between two successive power consumptions;  
 $n_1, n_2$ = starting and ending discrete time points of consumption recording

## Harmonic Analysis

## Wiring diagrams

When the CT is connected to earth, a leakage current from 0 to 1.8mA max is generated, whose value depends on the input impedance values of the instrument, on the type of connection and on the line voltage measured by the instrument.

F1= 315mA

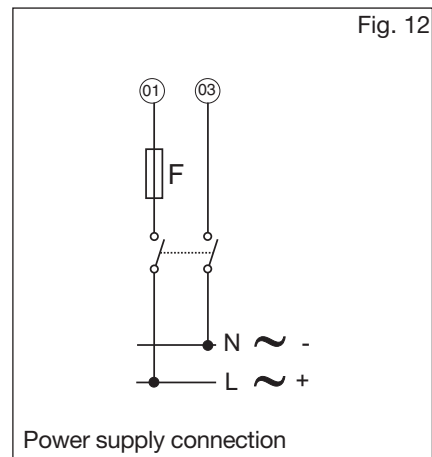

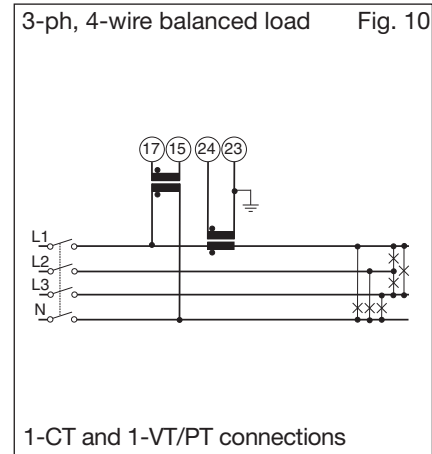

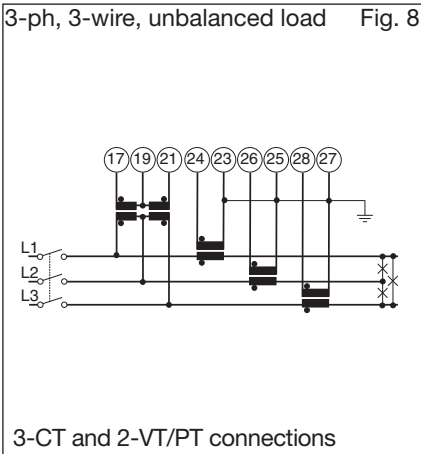

**NOTE:** the current inputs can be connected to the mains ONLY by means of current transformers. The direct connection is not allowed.

## Wiring diagrams

When the CT is connected to earth, a leakage current from 0 to 1.8mA max is generated, whose value depends on the input impedance values of the instrument, on the type of connection and on the line voltage measured by the instrument.

**NOTE:** the current inputs can be connected to the mains ONLY by means of current transformers. The direct connection is not allowed.

## Output connections

Fig. 13

Fig. 14

**Open collector outputs:** The load resistance (Rc) must be designed so that the closed contact current is lower than 100mA; the VDC voltage must be lower than or equal to 30V. VDC: external power supply voltage. Out: positive output contact (open collector transistor). GND: ground output contact (open collector transistor).

Relay out.

## Front Panel Description

**1. Display**

LED-type with alphanumeric indications to:  
- display configuration parameters;  
- display all the measured variables.

**2. Key-pad**

To program the configuration parameters and the display of the variables.

Key to enter programming and confirm selections;

Keys to:

- programme values;
- select functions;
- display measuring pages.

## Dimensions and Panel Cut-out
